

IFS SMARTFREIGHT® CLOUD

IFS SmartFreight® Cloud (SFC) - Full Feature Web Hosted Solution

IFS web-hosted Global Transport Management System (GTMS) that supports the despatch of freight from any country to any country. The system provides the customer with Route Optimisation and compliant labelling for domestic transport providers at the point of origin providing a customer with a “warehouse floor to customer’s door” solution.

Product Fit

IFS SmartFreight® Cloud (SFC) is aimed specifically to assist companies operating or wishing to operate in the online retail space.

Being 100% web-hosted by IFS allows SFC to be deployed quickly anywhere in the world to label freight for the local domestic carrier at source. This combined with the global partnerships IFS offers re customs clearance etc allows you to source product and ship direct to local customer without the cost and logistical issues of handling the goods, warehousing them locally and cost associated with holding stock.

Key Attributes

- Compliant with domestic carrier’s in Australia, New Zealand, UK, Ireland, mainland Europe and USA with new countries being added regularly.
- Freight label produced and attached in country of origin by manufacturer or by local 3PL warehouse / freight forwarder operation
- Route optimisation deployed to ensure the most cost or service effective local carrier is selected for the type of goods being shipped.
- Electronic data in the country of origin automatically sent to local freight forwarder for export requirements.
- Electronic data in the country of destination is automatically sent to local freight forwarder for import requirements and custom clearance.
- Electronic manifest is sent to the local carrier in country of destination to facilitate delivery.
- End-to-End tracking of consignment from country of origin to delivery to end customer with tracking events visible to all parties in the supply chain as they occur.
- A full list of Modules available within SmartFreight® Cloud – see Modules Insert

Cont’d overleaf

“Delivering Transport Software Solutions”

Return on Investment

- Pay local freight fees only from closest port of delivery to end customer rather than high cost door-to-door delivery.
- Bulk movement of multiple shipments reduces international freight cost dramatically.
- No local warehouse or 3PL costs
- No local pick / pack costs
- Nil stock holding

Many IFS clients utilising this product / service have experienced supply chain cost reductions in excess of 75% compared to shipping direct via an international door-to-door carrier or importing in bulk, warehousing goods with local labour to pick / pack / despatch and deliver.
